

ESP8684 Series

Datasheet

Ultra-Low-Power SoC with RISC-V Single-Core CPU

Supporting IEEE 802.11b/g/n (2.4 GHz Wi-Fi) and Bluetooth 5 (LE)

1 MB, 2 MB or 4 MB flash in the 4×4 mm QFN package

Including:

ESP8684H1

ESP8684H2

ESP8684H4

Version v1.1
Espressif Systems

Product Overview

ESP8684 series of SoCs is an ultra-low-power and highly-integrated MCU-based SoC solution that supports 2.4 GHz Wi-Fi and Bluetooth® Low Energy (Bluetooth LE). The block diagram of ESP8684 series is shown below.

Figure 1: Functional block diagram of ESP8684

Solution Highlights

- **A complete Wi-Fi subsystem** that complies with IEEE 802.11b/g/n protocol and supports Station mode, SoftAP mode, SoftAP + Station mode, and promiscuous mode
- **A Bluetooth LE subsystem** that supports features of Bluetooth 5, central role and peripheral role
- **State-of-the-art power and RF performance**
- **32-bit RISC-V single-core processor** with a four-stage pipeline that operates at up to 120 MHz
- **Storage capacity** ensured by 272 KB of SRAM (16 KB for cache) and 576 KB of ROM on the chip.
- **Reliable security features** ensured by
 - Cryptographic hardware accelerators that support ECC, Hash and secure boot
 - Random number generator
 - External memory encryption and decryption
- **Rich set of peripheral interfaces and GPIOs**, ideal for various scenarios and complex applications

Features

Wi-Fi

- IEEE 802.11 b/g/n-compliant
- Supports 20 MHz bandwidth in 2.4 GHz band
- 1T1R mode with data rate up to 72.2 Mbps
- Wi-Fi Multimedia (WMM)
- TX/RX A-MPDU, TX/RX A-MSDU
- Immediate Block ACK
- Fragmentation and defragmentation
- Transmit opportunity (TXOP)
- Automatic Beacon monitoring (hardware TSF)
- 3 × virtual Wi-Fi interfaces
- Simultaneous support for Infrastructure BSS in Station mode, SoftAP mode, Station + SoftAP mode, and promiscuous mode

Note that when ESP8684 series scans in Station mode, the SoftAP channel will change along with the Station channel

Bluetooth

- Bluetooth LE: Bluetooth 5
- High power mode 20 dBm
- Speed: 125 kbps, 500 kbps, 1 Mbps, 2 Mbps
- Advertising extensions
- Multiple advertisement sets
- Channel selection algorithm #2
- Internal co-existence mechanism between Wi-Fi and Bluetooth to share the same antenna

CPU and Memory

- 32-bit RISC-V single-core processor, up to 120 MHz
- CoreMark[®] score:
 - 1 core at 120 MHz: 305.42 CoreMark; 2.55 CoreMark/MHz
- 576 KB ROM

- 272 KB SRAM (16 KB for cache)
- SiP flash (see details in Chapter 1 [ESP8684 Series Comparison](#))
- Access to flash accelerated by cache
- Supports flash in-Circuit Programming (ICP)

Advanced Peripheral Interfaces

- 14 × programmable GPIOs
- Digital interfaces:
 - 3 × SPI
 - 2 × UART
 - 1 × I2C Master
 - LED PWM controller, with up to 6 channels
 - General DMA controller (GDMA), with 1 transmit channel and 1 receive channel
- Analog interfaces:
 - 1 × 12-bit SAR ADC, up to 5 channels
 - 1 × temperature sensor
- Timers:
 - 1 × 54-bit general-purpose timer
 - 2 × watchdog timers
 - 1 × 52-bit system timer

Low Power Management

- Power Management Unit with four power modes

Security

- Secure boot
- Flash encryption
- 1024-bit OTP, up to 256 bits for use
- Cryptographic hardware acceleration:
 - ECC
 - SHA Accelerator (FIPS PUB 180-4)
- Random Number Generator (RNG)

Applications (A Non-exhaustive List)

With ultra-low power consumption, ESP8684 is an ideal choice for IoT devices in the following areas:

- Smart Home
 - Light control
 - Smart button
 - Smart plug
 - Indoor positioning
- Industrial Automation
 - Industrial robot
 - Industrial field bus
- Consumer Electronics
 - Smart watch and bracelet
 - Over-the-top (OTT) devices
 - Logger toys and proximity sensing toys
- Health Care
 - Health monitor
 - Baby monitor
- Smart Agriculture
 - Smart greenhouse
 - Smart irrigation
 - Agriculture robot
- Retail and Catering
 - POS machines
 - Service robot
- Generic Low-power IoT Sensor Hubs
- Generic Low-power IoT Data Loggers

| XTAL_N | 22 | — | — | External crystal output |
| XTAL_P | 23 | — | — | External crystal input |
| VDDA | 24 | P _A | — | Analog power supply |
| GND | 25 | G | — | Ground |

¹ P_A: analog power supply; P_D: power supply for digital IO; I: input; O: output; T: high impedance.

² Pin functions in bold font are the default pin functions.

³ The pin function in this table refers only to some fixed settings and do not cover all cases for signals that can be input and output through the GPIO matrix. For more information on the GPIO matrix, please refer to Chapter IO MUX and GPIO Matrix (GPIO, IO_MUX) in [ESP8684 Technical Reference Manual](#).

2.3 Power Scheme

Digital pins of ESP8684 are divided into two different power domains:

- VDD3P3_CPU
- VDD3P3_RTC

VDD3P3_CPU is the input power supply for digital IO and digital system.

VDD3P3_RTC is the input power supply for RTC, RTC IO, and digital system.

The power scheme diagram is shown in Figure 4.

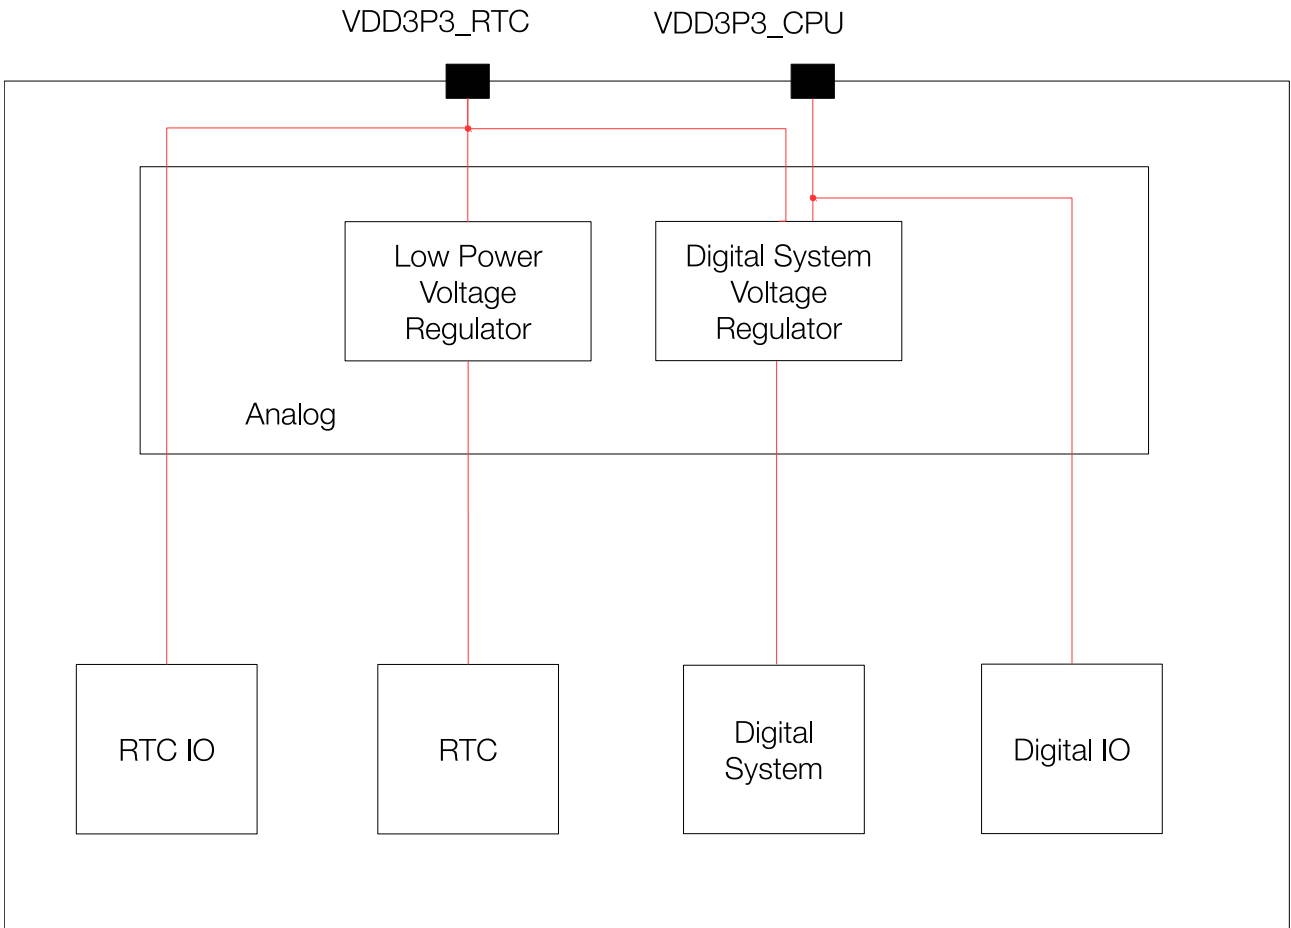

Figure 4: ESP8684 Series Power Scheme

Notes on CHIP_EN:

Figure 5 shows the power-up and reset timing of ESP8684 series. Details about the parameters are listed in Table 3.

Figure 5: ESP8684 Series Power-up and Reset Timing

Table 3: Description of ESP8684 Series Power-up and Reset Timing Parameters

| Parameter | Description | Min (μs) |
|-----------|--|-----------------------|
| t_0 | Time between bringing up the VDDA, VDDA3P3, VDD3P3_RTC, and VDD3P3_CPU rails, and activating CHIP_EN | 50 |
| t_1 | Duration of CHIP_EN signal level $< V_{IL_nRST}$ (refer to its value in Table 11) to reset the chip | 50 |

2.4 Strapping Pins

ESP8684 series has two strapping pins:

- GPIO8
- GPIO9

Software can read the values of GPIO8 and GPIO9 from GPIO_STRAPPING field in GPIO_STRAP_REG register. For register description, please refer to Section GPIO Matrix Register Summary in

[ESP8684 Technical Reference Manual](#).

During the chip's power-on reset, RTC watchdog reset, and brownout reset, the latches of the strapping pins sample the voltage level as strapping bits of "0" or "1", and hold these bits until the chip is powered down or shut down.

By default, GPIO9 is connected to the internal weak pull-up resistor. If GPIO9 is not connected or connected to an external high-impedance circuit, the latched bit value will be "1".

To change the strapping bit values, you can apply the external pull-down/pull-up resistances, or use the host MCU's GPIOs to control the voltage level of these pins when powering on ESP8684.

After reset, the strapping pins work as normal-function pins.

Table 4 lists detailed booting configurations of the strapping pins.

Table 4: Strapping Pins

| Booting Mode ¹ | | | |
|--|-----------------------|---|---------------|
| Pin | Default | SPI Boot | Download Boot |
| GPIO8 | N/A | Don't care | 1 |
| GPIO9 | Internal weak pull-up | 1 | 0 |
| Enabling/Disabling ROM Messages Print During Booting | | | |
| Pin | Default | Functionality | |
| GPIO8 | N/A | When the value of eFuse field EFUSE_UART_PRINT_CONTROL is 0 (default), print is enabled and not controlled by GPIO8. 1, if GPIO8 is 0, print is enabled; if GPIO8 is 1, it is disabled. 2, if GPIO8 is 0, print is disabled; if GPIO8 is 1, it is enabled. 3, print is disabled and not controlled by GPIO8. | |

¹ The strapping combination of GPIO8 = 0 and GPIO9 = 0 is invalid and will trigger unexpected behavior.

Figure 6 shows the setup and hold times for the strapping pins before and after the CHIP_EN signal goes high. Details about the parameters are listed in Table 5.

Figure 6: Setup and Hold Times for the Strapping Pins

Table 5: Parameter Descriptions of Setup and Hold Times for the Strapping Pins

| Parameter | Description | Min (ms) |
|-----------|---|----------|
| t_0 | Setup time before CHIP_EN goes from low to high | 0 |
| t_1 | Hold time after CHIP_EN goes high | 3 |

3 Functional Description

This chapter describes the functions of ESP8684.

3.1 Radio and Wi-Fi

The ESP8684 series radio consists of the following blocks:

- 2.4 GHz receiver
- 2.4 GHz transmitter
- bias and regulators
- balun and transmit-receive switch
- clock generator

3.1.1 2.4 GHz Receiver

The 2.4 GHz receiver demodulates the 2.4 GHz RF signal to quadrature baseband signals and converts them to the digital domain with two high-resolution, high-speed ADCs. To adapt to varying signal channel conditions, ESP8684 series integrates RF filters, Automatic Gain Control (AGC), DC offset cancelation circuits, and baseband filters.

3.1.2 2.4 GHz Transmitter

The 2.4 GHz transmitter modulates the quadrature baseband signals to the 2.4 GHz RF signal, and drives the antenna with a high-powered CMOS power amplifier. The use of digital calibration further improves the linearity of the power amplifier.

Additional calibrations are integrated to cancel any radio imperfections, such as:

- carrier leakage
- I/Q amplitude/phase matching
- baseband nonlinearities
- RF nonlinearities
- antenna matching

These built-in calibration routines reduce the cost, time, and specialized equipment required for product testing.

3.1.3 Clock Generator

The clock generator produces quadrature clock signals of 2.4 GHz for both the receiver and the transmitter. All components of the clock generator are integrated into the chip, including inductors, varactors, filters, regulators and dividers.

The clock generator has built-in calibration and self-test circuits. Quadrature clock phases and phase noise are optimized on chip with patented calibration algorithms which ensure the best performance of the receiver and the transmitter.

3.1.4 Wi-Fi Radio and Baseband

The ESP8684 series Wi-Fi radio and baseband support the following features:

- 802.11b/g/n
- 802.11n MCS0-7 that supports 20 MHz bandwidth
- 802.11n 0.4 μ s guard interval
- data rate up to 72.2 Mbps
- RX STBC (single spatial stream)
- adjustable transmitting power

3.1.5 Wi-Fi MAC

ESP8684 series implements the full 802.11 b/g/n Wi-Fi MAC protocol. It supports the Basic Service Set (BSS) STA and SoftAP operations under the Distributed Control Function (DCF). Power management is handled automatically with minimal host interaction to minimize the active duty period.

The ESP8684 series Wi-Fi MAC applies the following low-level protocol functions automatically:

- 3 \times virtual Wi-Fi interfaces
- infrastructure BSS in Station mode, SoftAP mode, Station + SoftAP mode, and promiscuous mode
- RTS protection, CTS protection, Immediate Block ACK
- fragmentation and defragmentation
- TX/RX A-MPDU, TX/RX A-MSDU
- transmit opportunity (TXOP)
- Wi-Fi multimedia (WMM)
- CCMP, TKIP, WEP, BIP, WPA2-PSK/WPA2-Enterprise, and WPA3-PSK/WPA3-Enterprise
- automatic beacon monitoring (hardware TSF)

3.1.6 Networking Features

Espressif provides libraries for TCP/IP networking and other networking protocols over Wi-Fi. TLS 1.2 (default) and 1.3 are also supported.

3.2 Bluetooth LE

ESP8684 series includes a Bluetooth Low Energy subsystem that integrates a hardware link layer controller, an RF/modem block and a feature-rich software protocol stack. It supports the core features of Bluetooth 5.

3.2.1 Bluetooth LE Radio and PHY

Bluetooth Low Energy radio and PHY in ESP8684 series support:

- 1 Mbps PHY
- 2 Mbps PHY for higher data rates

- coded PHY for longer range (125 Kbps and 500 Kbps)
- HW listen before talk (LBT)

3.2.2 Bluetooth LE Link Layer Controller

Bluetooth Low Energy Link Layer Controller in ESP8684 series supports:

- LE advertising extensions, to enhance broadcasting capacity and broadcast more intelligent data
- multiple advertisement sets
- simultaneous advertising and scanning
- adaptive frequency hopping and channel assessment
- LE channel selection algorithm #2
- connection parameter update
- high duty cycle non-connectable advertising
- LE privacy 1.2
- LE data packet length extension
- link layer extended scanner filter policies
- low duty cycle directed advertising
- link layer encryption
- LE Ping

3.3 CPU and Memory

3.3.1 CPU

ESP8684 series has a low-power 32-bit RISC-V single-core microprocessor with the following features:

- four-stage pipeline that supports a clock frequency of up to 120 MHz
- RV32IMC ISA
- 32-bit multiplier and 32-bit divider
- up to 32 vectored interrupts at seven priority levels
- up to 2 hardware breakpoints/watchpoints
- JTAG for debugging

3.3.2 Internal Memory

ESP8684's internal memory includes:

- **576 KB of ROM:** for booting and core functions.
- **272 KB of on-chip SRAM:** for data and instructions. Of the 272 KB SRAM, 16 KB is configured for cache.
- **1 Kbit of eFuse:** 256 bits are reserved for your data, such as encryption key and device ID.

- **SiP flash** : See details in Chapter 1 [ESP8684 Series Comparison](#).

3.3.3 Address Mapping Structure

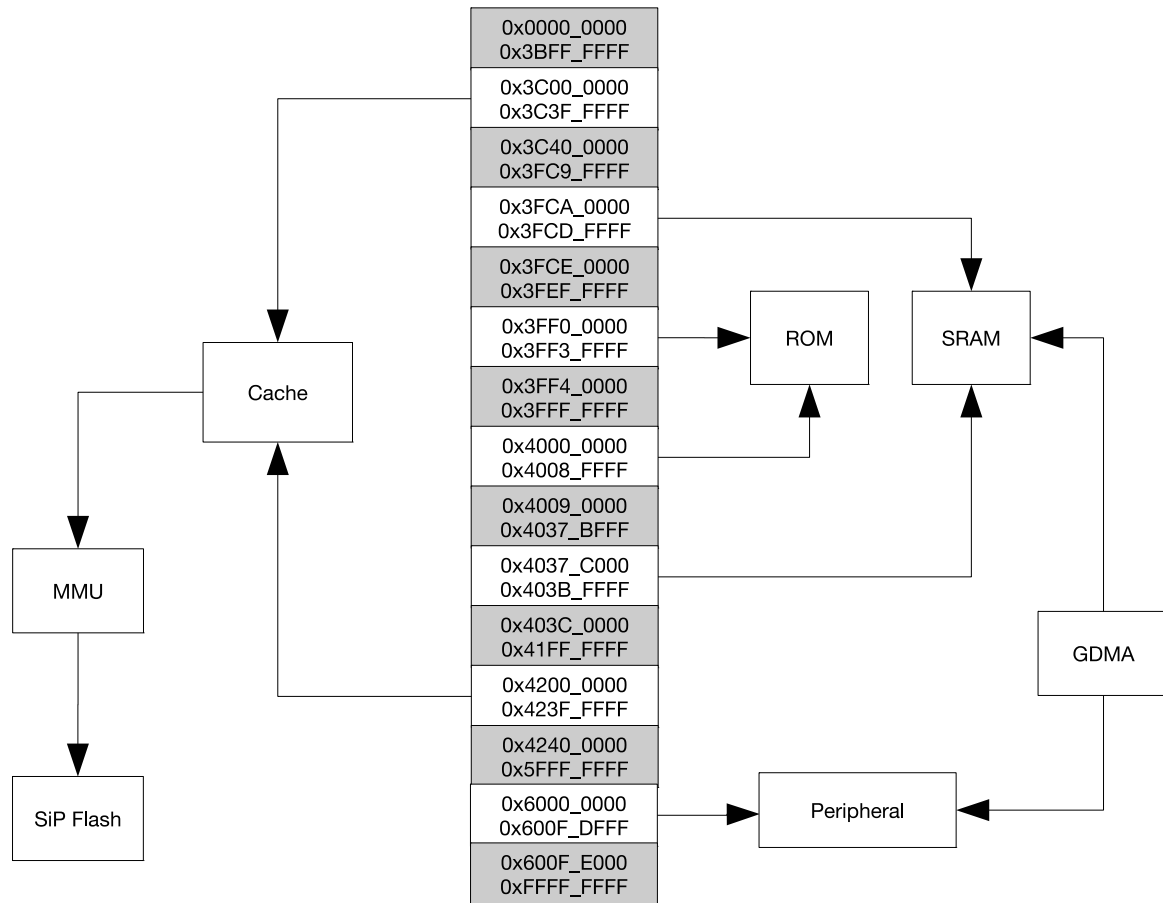

Figure 7: Address Mapping Structure

Note:

The memory space with gray background is not available for use.

3.3.4 Cache

ESP8684 series has an four-way set associative cache. This cache is read-only and has the following features:

- size: 16 KB
- block size: 32 bytes
- critical word first and early restart

3.4 System Clocks

3.4.1 CPU Clock

The CPU clock has three possible sources:

- external main crystal clock
- fast RC oscillator (typically about 17.5 MHz, and adjustable)
- PLL clock

The application can select the clock source from the three clocks above. The selected clock source drives the CPU clock directly, or after division, depending on the application. Once the CPU is reset, the default clock source would be the external main crystal clock divided by 2.

Note:

ESP8684 is unable to operate without an external main crystal clock.

3.4.2 RTC Clock

The RTC slow clock is used for RTC counter, RTC watchdog and low-power controller. It has three possible sources:

- internal slow RC oscillator (typically about 136 kHz, and adjustable)
- internal fast RC oscillator divided clock (derived from the fast RC oscillator divided by 256)
- external slow clock (clock signal input through GPIO0, and typically about 32.768 kHz)

The RTC fast clock is used for RTC peripherals and sensor controllers. It has two possible sources:

- external main crystal clock divided by 2
- internal fast RC oscillator clock (typically about 17.5 MHz, and adjustable)

3.5 Digital Peripherals

3.5.1 General Purpose Input / Output Interface (GPIO)

ESP8684 has 14 GPIO pins which can be assigned various functions by configuring corresponding registers. Besides digital signals, some GPIOs can be also used for analog functions, such as ADC.

All GPIOs have selectable internal pull-up or pull-down, or can be set to high impedance. When these GPIOs are configured as an input, the input value can be read by software through the register. Input GPIOs can also be set to generate edge-triggered or level-triggered CPU interrupts. All digital IO pins are bi-directional, non-inverting and tristate, including input and output buffers with tristate control. These pins can be multiplexed with other functions, such as the UART, SPI, etc. For low-power operations, the GPIOs can be set to holding state.

The IO MUX and the GPIO matrix are used to route signals from peripherals to GPIO pins. Together they provide highly configurable I/O. Using GPIO Matrix, peripheral input signals can be configured from any IO pins while peripheral output signals can be configured to any IO pins. Table 6 shows the IO MUX functions of each pin. For more information about IO MUX and GPIO matrix, please refer to Chapter IO MUX and GPIO Matrix (GPIO, IO_MUX) in [ESP8684 Technical Reference Manual](#).

Table 6: IO MUX Pin Functions

| Name | No. | Function 0 | Function 1 | Function 2 | Reset | Notes |
|-------|-----|------------|------------|------------|-------|-------|
| GPIO0 | 4 | GPIO0 | GPIO0 | — | 0 | R, G |

| Name | No. | Function 0 | Function 1 | Function 2 | Reset | Notes |
|--------|-----|------------|------------|------------|-------|-------|
| GPIO1 | 5 | GPIO1 | GPIO1 | — | 0 | R, G |
| GPIO2 | 6 | GPIO2 | GPIO2 | FSPIQ | 1 | R |
| GPIO3 | 8 | GPIO3 | GPIO3 | — | 1 | R, G |
| MTMS | 9 | MTMS | GPIO4 | FSPIHD | 1 | R |
| MTDI | 10 | MTDI | GPIO5 | FSPIWP | 1 | R, G |
| MTCK | 12 | MTCK | GPIO6 | FSPICLK | 1* | — |
| MTDO | 13 | MTDO | GPIO7 | FSPID | 1 | — |
| GPIO8 | 14 | GPIO8 | GPIO8 | — | 1 | — |
| GPIO9 | 15 | GPIO9 | GPIO9 | — | 3 | — |
| GPIO10 | 16 | GPIO10 | GPIO10 | FSPICS0 | 1 | — |
| GPIO18 | 18 | GPIO18 | GPIO18 | — | 0 | — |
| U0RXD | 19 | U0RXD | GPIO19 | — | 3 | — |
| U0TXD | 20 | U0TXD | GPIO20 | — | 4 | — |

Reset

The default configuration of each pin after reset:

- **0** - input disabled, in high impedance state (IE = 0)
- **1** - input enabled, in high impedance state (IE = 1)
- **2** - input enabled, pull-down resistor enabled (IE = 1, WPD = 1)
- **3** - input enabled, pull-up resistor enabled (IE = 1, WPU = 1)
- **4** - output enabled, pull-up resistor enabled (OE = 1, WPU = 1)
- **1*** - When the value of eFuse bit EFUSE_DIS_PAD_JTAG is
 - 0, input enabled, pull-up resistor enabled (IE = 1, WPU = 1)
 - 1, input enabled, in high impedance state (IE = 1)

We recommend pulling high or low GPIO pins in high impedance state to avoid unnecessary power consumption. You may add pull-up and pull-down resistors in your PCB design referring to Table 11, or enable internal pull-up and pull-down resistors during software initialization.

Notes

- **R** - These pins have analog functions.
- **G** - These pins have glitches during power-up. See details in Table 7.

Table 7: Power-Up Glitches on Pins

| Pin | Glitch ¹ | Typical Time Period (μs) |
|-------|---------------------|--------------------------|
| GPIO0 | Low-level glitch | 40 |
| GPIO1 | Low-level glitch | 60 |
| GPIO3 | Low-level glitch | 40 |
| MTDI | Low-level glitch | 60 |

¹ Low-level glitch: the pin is at a low level during the time period;

3.5.2 Serial Peripheral Interface (SPI)

ESP8684 series features three SPI interfaces (SPI0, SPI1, and SPI2). SPI0 and SPI1 can be configured to operate in SPI memory mode and SPI2 can be configured to operate in general-purpose SPI mode.

- **SPI Memory mode**

In SPI memory mode, SPI0 and SPI1 interface with SiP flash. Data is transferred in bytes. Up to four-line STR reads and writes are supported. The clock frequency is configurable to a maximum of 60 MHz in STR mode.

- **SPI2 General-purpose SPI (GP-SPI) mode**

When SPI2 acts as a general-purpose SPI, it can operate in master and slave modes. SPI2 supports two-line full-duplex communication and single-/two-/four-line half-duplex communication in both master and slave modes. The host's clock frequency of SPI2 is configurable. Data is transferred in bytes. The clock polarity (CPOL) and phase (CPHA) are also configurable. The SPI2 interface can connect to GDMA.

In master or slave mode, the clock frequency is 40 MHz at most, and the four modes of SPI transfer format are supported.

3.5.3 Universal Asynchronous Receiver Transmitter (UART)

ESP8684 series has two UART interfaces, i.e. UART0 and UART1, which support IrDA and asynchronous communication (RS232 and RS485) at a speed of up to 2.5 Mbps. The UART controller provides hardware flow control (CTS and RTS signals) and software flow control (XON and XOFF).

3.5.4 I2C Interface

ESP8684 series has an I2C bus master interface. The I2C interface supports:

- standard mode (100 Kbit/s)
- fast mode (400 Kbit/s)
- up to 800 Kbit/s (constrained by SCL and SDA pull-up strength)
- 7-bit and 10-bit addressing mode
- double addressing mode
- 7-bit broadcast address

You can configure instruction registers to control the I2C interface for more flexibility.

3.5.5 LED PWM Controller

The LED PWM controller has the following features:

- Six identical, independent PWM generators (i.e. channels) that generate digital waveforms
- Configurable waveform periods and duty cycle
- Maximum PWM resolution: 18 bits
- PWM signal output in low-power mode (Light-sleep mode)

- Automatic duty cycle fading - gradual increase/decrease of PWM duty cycle, which is useful for the LED RGB color-gradient generator.

3.5.6 General DMA Controller

ESP8684 series has a general DMA controller (GDMA) with two independent channels, i.e. one transmit channel and one receive channel. These two channels are shared by peripherals with DMA feature. The GDMA controller implements a fixed-priority scheme among these channels, whose priority can be configured.

The GDMA controller controls data transfer using linked lists. It allows peripheral-to-memory and memory-to-memory data transfer at a high speed. All channels can access internal RAM.

Peripherals on ESP8684 series with DMA feature are SPI2 and SHA.

3.6 Analog Peripherals

3.6.1 Analog-to-Digital Converter (ADC)

ESP8684 series integrates a 12-bit SAR ADC, which supports measurements on 5 channels.

For ADC characteristics, please refer to Table 12.

3.6.2 Temperature Sensor

The temperature sensor generates a voltage that varies with temperature. The voltage is internally converted via an ADC into a digital value.

The temperature sensor has a range of $-40\text{ }^{\circ}\text{C}$ to $125\text{ }^{\circ}\text{C}$. It is designed primarily to sense the temperature changes inside the chip. The temperature value depends on factors like microcontroller clock frequency or I/O load. Generally, the chip's internal temperature is higher than the operating ambient temperature.

3.7 Timers

3.7.1 General Purpose Timer

ESP8684 series is embedded with a 54-bit general-purpose timer, which is based on a 16-bit prescaler and a 54-bit auto-reload-capable up/down-timer.

The timers' features are summarized as follows:

- a 16-bit clock prescaler, from 2 to 65536
- a 54-bit time-base counter programmable to be incrementing or decrementing
- able to read real-time value of the time-base counter
- halting and resuming the time-base counter
- programmable alarm generation
- level interrupt generation

3.7.2 System Timer

ESP8684 series integrates a 52-bit system timer, which has two 52-bit counters and three comparators. The system timer has the following features:

- counters with a fixed clock frequency of 16 MHz
- three types of independent interrupts generated according to alarm value
- two alarm modes: target mode and period mode
- 52-bit target alarm value and 26-bit periodic alarm value
- automatic reload of counter value
- counters can be stalled if the CPU is stalled or in OCD mode

3.7.3 Watchdog Timers

The ESP8684 series contains two watchdog timers: one in general-purpose timer group (called Main System Watchdog Timer, or MWDT) and one in the RTC module (called the RTC Watchdog Timer, or RWDT).

During the flash boot process, RWDT and MWDT are enabled automatically in order to detect and recover from booting errors.

Watchdog timers have the following features:

- four stages, each with a programmable timeout value. Each stage can be configured, enabled and disabled separately
- interrupt, CPU reset, or core reset for MWDT upon expiry of each stage; interrupt, CPU reset, core reset, or system reset for RWDT upon expiry of each stage
- 32-bit expiry counter
- write protection, to prevent RWDT and MWDT configuration from being altered inadvertently
- flash boot protection
If the boot process from an SPI flash does not complete within a predetermined period of time, the watchdog will reboot the entire main system.

3.8 Low Power Management

With the use of advanced power-management technologies, ESP8684 series can switch between different power modes.

- Active mode: CPU and chip radio are powered on. The chip can receive, transmit, or listen.
- Modem-sleep mode: The CPU is operational and the clock speed can be reduced. Wireless base band, and radio are disabled, but wireless connection can remain active.
- Light-sleep mode: The CPU is paused. Any wake-up events (MAC, host, RTC timer, or external interrupts) will wake up the chip. Wireless connection can remain active.
- Deep-sleep mode: CPU and most peripherals are powered down. Only the PMU in RTC power management unit is powered on. For more details, please refer to Figure 1.

For power consumption in different power modes, please refer to [Current Consumption](#).

3.9 Cryptographic Hardware Accelerators

ESP8684 series is equipped with hardware accelerators of general algorithms, such as:

- SHA1/SHA224/SHA256 (FIPS PUB 180-4)
- ECC

3.10 Physical Security Features

- SiP flash encryption (AES-XTS algorithm) with software inaccessible key prevents unauthorized readout of your application code or data.
- Secure boot feature uses a hardware root of trust to ensure only signed firmware can be booted.

3.11 Peripheral Pin Configurations

Table 8: Peripheral Pin Configurations

| Interface | Signal | Pin | Function |
|-----------|---------------------|---------------|--|
| ADC | ADC1_CH0 | GPIO0 | One 12-bit SAR ADC |
| | ADC1_CH1 | GPIO1 | |
| | ADC1_CH2 | GPIO2 | |
| | ADC1_CH3 | GPIO3 | |
| | ADC1_CH4 | MTMS | |
| JTAG | MTDI | MTDI | JTAG for software debugging |
| | MTCK | MTCK | |
| | MTMS | MTMS | |
| | MTDO | MTDO | |
| UART | U0RXD_in | Any GPIO pins | Two UART channels with hardware flow control |
| | U0CTS_in | | |
| | U0DSR_in | | |
| | U0TXD_out | | |
| | U0RTS_out | | |
| | U0DTR_out | | |
| | U1RXD_in | | |
| | U1CTS_in | | |
| | U1DSR_in | | |
| | U1TXD_out | | |
| | U1RTS_out | | |
| | U1DTR_out | | |
| I2C | I2CEXT0_SCL_in | Any GPIO pins | One I2C channel in slave or master mode |
| | I2CEXT0_SDA_in | | |
| | I2CEXT0_SCL_out | | |
| | I2CEXT0_SDA_out | | |
| LED PWM | ledc_ls_sig_out0~5 | Any GPIO pins | Six independent PWM channels |
| SPI2 | FSPICLK_in/_out_mux | Any GPIO pins | <ul style="list-style-type: none"> • Master mode and slave mode of SPI, Dual SPI, Quad SPI, and QPI • Connection to external flash, RAM, and other SPI devices • Four modes of SPI transfer format • Configurable SPI frequency • 64-byte FIFO or GDMA buffer |
| | FSPICS0_in/_out | | |

| Interface | Signal | Pin | Function |
|-----------|----------------|-----|----------|
| | FSPICS1~5_out | | |
| | FSPID_in/_out | | |
| | FSPIQ_in/_out | | |
| | FSPIWP_in/_out | | |
| | FSPIHD_in/_out | | |

4 Electrical Characteristics

4.1 Absolute Maximum Ratings

Stresses beyond the absolute maximum ratings listed in the table below may cause permanent damage to the device. These are stress ratings only, and do not refer to the functional operation of the device.

Table 9: Absolute Maximum Ratings

| Symbol | Parameter | Min | Max | Unit |
|---------------------------------------|---|------|-----|------|
| VDDA3P3, VDDA, VDD3P3_RTC, VDD3P3_CPU | Voltage applied to power supply pins per power domain | -0.3 | 3.6 | V |
| I_{output}^1 | Cumulative IO output current | — | 730 | mA |
| T_{STORE} | Storage temperature | -40 | 150 | °C |

¹ The chip worked properly after a 24-hour test in ambient temperature at 25 °C, and the IOs in two domains (VDD3P3_RTC, VDD3P3_CPU) output high logic level to ground.

4.2 Recommended Operating Conditions

Table 10: Recommended Operating Conditions

| Symbol | Parameter | Min | Typ | Max | Unit |
|--|--|-----|-----|-----|------|
| VDDA3P3, VDDA, VDD3P3_RTC, VDD3P3_CPU ¹ | Voltage applied to power supply pin | 3.0 | 3.3 | 3.6 | V |
| I_{VDD}^2 | Current delivered by external power supply | 0.5 | — | — | A |
| T_A | Operating ambient temperature | -40 | — | 105 | °C |

¹ To write eFuse, VDD3P3_CPU should not be higher than 3.3 V.

² If you use a single power supply, the recommended output current is 500 mA or more.

4.3 DC Characteristics (3.3 V, 25 °C)

Table 11: DC Characteristics (3.3 V, 25 °C)

| Symbol | Parameter | Min | Typ | Max | Unit |
|------------|--|---------------------|-----|---------------------|------|
| C_{IN} | Pin capacitance | — | 2 | — | pF |
| V_{IH} | High-level input voltage | $0.75 \times VDD^1$ | — | $VDD^1 + 0.3$ | V |
| V_{IL} | Low-level input voltage | -0.3 | — | $0.25 \times VDD^1$ | V |
| I_{IH} | High-level input current | — | — | 50 | nA |
| I_{IL} | Low-level input current | — | — | 50 | nA |
| V_{OH}^2 | High-level output voltage | $0.8 \times VDD^1$ | — | — | V |
| V_{OL}^2 | Low-level output voltage | — | — | $0.1 \times VDD^1$ | V |
| I_{OH} | High-level source current ($VDD^1 = 3.3$ V, $V_{OH} \geq 2.64$ V, PAD_DRIVER = 3) | — | 40 | — | mA |

| | | | | | |
|----------------|--|------------------------|----|------------------------|-----------|
| I_{OL} | Low-level sink current ($V_{DD}^1 = 3.3\text{ V}$, $V_{OL} = 0.495\text{ V}$, $PAD_DRIVER = 3$) | — | 28 | — | mA |
| R_{PU} | Pull-up resistor | — | 45 | — | $k\Omega$ |
| R_{PD} | Pull-down resistor | — | 45 | — | $k\Omega$ |
| V_{IH_nRST} | Chip reset release voltage | $0.75 \times V_{DD}^1$ | — | $V_{DD}^1 + 0.3$ | V |
| V_{IL_nRST} | Chip reset voltage | -0.3 | — | $0.25 \times V_{DD}^1$ | V |

¹ VDD is the I/O voltage for a particular power domain of pins.

² V_{OH} and V_{OL} are measured using high-impedance load.

4.4 ADC Characteristics

Table 12: ADC Characteristics

| Symbol | Parameter | Min | Max | Unit |
|--|---|-----|-----|-------------------|
| DNL (Differential nonlinearity) ¹ | ADC connected to an external 100 nF capacitor; DC signal input; ambient temperature at 25 °C; Wi-Fi off | -1 | 3 | LSB |
| INL (Integral nonlinearity) | | -4 | 8 | LSB |
| Sampling rate | — | — | 100 | kSPS ² |

¹ To get better DNL results, you can sample multiple times and apply a filter, or calculate the average value.

² kSPS means kilo samples-per-second.

ESP-IDF provides a couple of [calibration methods](#) for ADC. Results after calibration using hardware + software calibration are shown in Table 13. For higher accuracy, users may apply other calibration methods provided in ESP-IDF, or implement their own.

Table 13: ADC Calibration Results

| Parameter | Description | Min | Max | Unit |
|-------------|---|-----|-----|------|
| Total error | ATTEN0, effective measurement range of 0 ~ 950 | -5 | 5 | mV |
| | ATTEN3, effective measurement range of 0 ~ 2800 | -10 | 10 | mV |

4.5 Current Consumption

4.5.1 RF Current Consumption in Active Mode

The current consumption measurements are taken with a 3.3 V supply at 25 °C of ambient temperature at the RF port. All transmitters' measurements are based on a 100% duty cycle.

Table 14: Current Consumption Depending on RF Modes

| Work mode | Description | | Peak (mA) |
|---------------------|-------------|------------------------------|-----------|
| Active (RF working) | TX | 802.11b, 1 Mbps, @22 dBm | 370 |
| | | 802.11g, 54 Mbps, @20 dBm | 320 |
| | | 802.11n, HT20, MCS7, @19 dBm | 300 |
| | RX | 802.11b/g/n, HT20 | 65 |

4.5.2 Current Consumption in Other Modes

Table 15: Current Consumption in Low-Power Modes

| Work mode | Description | Typ | Unit |
|-------------|--|-----|------|
| Light-sleep | — | 140 | μA |
| Deep-sleep | Only RTC timer is powered on | 5 | μA |
| Power off | CHIP_EN is set to low level, and the chip is powered off | 1 | μA |

Table 16: Current Consumption in Modem-sleep Mode

| Work mode | Frequency (MHz) | Description | Typ ¹ (mA) | Typ ² (mA) |
|--------------------------|-----------------|--------------------------|-----------------------|-----------------------|
| Modem-sleep ³ | 80 | WFI (Wait-for-Interrupt) | 9.4 | 10.3 |
| | | CPU run at full speed | 12.1 | 13.0 |
| | 120 | WFI (Wait-for-Interrupt) | 10.7 | 11.5 |
| | | CPU run at full speed | 14.7 | 15.6 |

¹ Current consumption when all peripheral clocks are **disabled**.

² Current consumption when all peripheral clocks are **enabled**. In practice, the current consumption might be different depending on which peripherals are enabled.

³ In Modem-sleep mode, Wi-Fi is clock gated, and the current consumption might be higher when accessing flash. For a flash rated at 80 Mbit/s, in SPI 2-line mode the consumption is 10 mA.

4.6 Reliability

Table 17: Reliability Qualifications

| Test Item | Test Conditions | Test Standard |
|--|---|-----------------------------------|
| HTOL (High Temperature Operating Life) | 125 °C, 1000 hours | JESD22-A108 |
| ESD (Electro-Static Discharge Sensitivity) | HBM (Human Body Mode) ¹ ± 2000 V | JS-001 |
| | CDM (Charge Device Mode) ² ± 1000 V | JS-002 |
| Latch up | Current trigger ± 200 mA | JESD78 |
| | Voltage trigger $1.5 \times V_{DD,max}$ | |
| Preconditioning | Bake 24 hours @125 °C Moisture soak (level 3: 192 hours @30 °C, 60% RH) IR reflow solder: 260 + 0 °C, 20 seconds, three times | J-STD-020, JESD47, JESD22-A113 |
| TCT (Temperature Cycling Test) | -65 °C / 150 °C, 500 cycles | JESD22-A104 |
| uHAST (Highly Accelerated Stress Test, unbiased) | 130 °C, 85% RH, 96 hours | JESD22-A118 |
| HTSL (High Temperature Storage Life) | 150 °C, 1000 hours | JESD22-A103 |
| LTSL (Low Temperature Storage Life) | -40 °C, 1000 hours | JESD22-A119 |

¹ JEDEC document JEP155 states that 500 V HBM allows safe manufacturing with a standard ESD control process.

² JEDEC document JEP157 states that 250 V CDM allows safe manufacturing with a standard ESD control process.

4.7 Wi-Fi Radio

Table 18: Wi-Fi Frequency

| Parameter | Min (MHz) | Typ (MHz) | Max (MHz) |
|---------------------------------------|-----------|-----------|-----------|
| Center frequency of operating channel | 2412 | — | 2484 |

4.7.1 Wi-Fi RF Transmitter (TX) Specifications

Table 19: TX Power with Spectral Mask and EVM Meeting 802.11 Standards

| Rate | Min (dBm) | Typ (dBm) | Max (dBm) |
|---------------------|-----------|-----------|-----------|
| 802.11b, 1 Mbps | — | 21.5 | — |
| 802.11b, 11 Mbps | — | 21.5 | — |
| 802.11g, 6 Mbps | — | 21.5 | — |

| | Min $\Delta f_{2_{max}}$ (for at least 99.9% of all $\Delta f_{2_{max}}$) | — | 234.5 | — | kHz |
| In-band spurious emissions | ± 2 MHz offset | — | -32 | — | dBm |
| | ± 3 MHz offset | — | -38 | — | dBm |
| | $> \pm 3$ MHz offset | — | -41 | — | dBm |

4.8.2 Bluetooth LE RF Receiver (RX) Specifications

Table 30: Receiver Characteristics - Bluetooth LE 1 Mbps

| Parameter | Description | Min | Typ | Max | Unit |
|-------------------------------------|--------------------------------|-----|-------|-----|------|
| Sensitivity @30.8% PER | — | — | -98.0 | — | dBm |
| Maximum received signal @30.8% PER | — | — | 8 | — | dBm |
| Co-channel C/I | F = F0 MHz | — | 8 | — | dB |
| Adjacent channel selectivity C/I | F = F0 + 1 MHz | — | -1 | — | dB |
| | F = F0 - 1 MHz | — | -3 | — | dB |
| | F = F0 + 2 MHz | — | -26 | — | dB |
| | F = F0 - 2 MHz | — | -28 | — | dB |
| | F = F0 + 3 MHz | — | -34 | — | dB |
| | F = F0 - 3 MHz | — | -33 | — | dB |
| | F \geq F0 + 4 MHz | — | -33 | — | dB |
| F \leq F0 - 4 MHz | — | -31 | — | dB | |
| Image frequency | — | — | -33 | — | dB |
| Adjacent channel to image frequency | F = F _{image} + 1 MHz | — | -32 | — | dB |
| | F = F _{image} - 1 MHz | — | -34 | — | dB |
| Out-of-band blocking performance | 30 MHz ~ 2000 MHz | — | -23 | — | dBm |
| | 2003 MHz ~ 2399 MHz | — | -30 | — | dBm |
| | 2484 MHz ~ 2997 MHz | — | -10 | — | dBm |
| | 3000 MHz ~ 12.75 GHz | — | -17 | — | dBm |
| Intermodulation | — | — | -31 | — | dBm |

Table 31: Receiver Characteristics - Bluetooth LE 2 Mbps

| Parameter | Description | Min | Typ | Max | Unit |
|------------------------------------|----------------|-----|-------|-----|------|
| Sensitivity @30.8% PER | — | — | -95.0 | — | dBm |
| Maximum received signal @30.8% PER | — | — | 8 | — | dBm |
| Co-channel C/I | F = F0 MHz | — | 9 | — | dB |
| | F = F0 + 2 MHz | — | -11 | — | dB |

Table 31 – cont'd from previous page

| Parameter | Description | Min | Typ | Max | Unit |
|-------------------------------------|---------------------------------|-----|-----|-----|------|
| | $F = F_0 - 2 \text{ MHz}$ | — | -7 | — | dB |
| | $F = F_0 + 4 \text{ MHz}$ | — | -35 | — | dB |
| | $F = F_0 - 4 \text{ MHz}$ | — | -30 | — | dB |
| | $F = F_0 + 6 \text{ MHz}$ | — | -35 | — | dB |
| | $F = F_0 - 6 \text{ MHz}$ | — | -29 | — | dB |
| | $F \geq F_0 + 8 \text{ MHz}$ | — | -39 | — | dB |
| | $F \leq F_0 - 8 \text{ MHz}$ | — | -33 | — | dB |
| Image frequency | — | — | -35 | — | dB |
| Adjacent channel to image frequency | $F = F_{image} + 2 \text{ MHz}$ | — | -35 | — | dB |
| | $F = F_{image} - 2 \text{ MHz}$ | — | -11 | — | dB |
| Out-of-band blocking performance | 30 MHz ~ 2000 MHz | — | -30 | — | dBm |
| | 2003 MHz ~ 2399 MHz | — | -34 | — | dBm |
| | 2484 MHz ~ 2997 MHz | — | -19 | — | dBm |
| | 3000 MHz ~ 12.75 GHz | — | -28 | — | dBm |
| Intermodulation | — | — | -33 | — | dBm |

Table 32: Receiver Characteristics - Bluetooth LE 125 Kbps

| Parameter | Description | Min | Typ | Max | Unit |
|-------------------------------------|---------------------------------|-----|--------|-----|------|
| Sensitivity @30.8% PER | — | — | -106.0 | — | dBm |
| Maximum received signal @30.8% PER | — | — | 8 | — | dBm |
| Co-channel C/I | $F = F_0 \text{ MHz}$ | — | 3 | — | dB |
| Adjacent channel selectivity C/I | $F = F_0 + 1 \text{ MHz}$ | — | -7 | — | dB |
| | $F = F_0 - 1 \text{ MHz}$ | — | -5 | — | dB |
| | $F = F_0 + 2 \text{ MHz}$ | — | -35 | — | dB |
| | $F = F_0 - 2 \text{ MHz}$ | — | -34 | — | dB |
| | $F = F_0 + 3 \text{ MHz}$ | — | -38 | — | dB |
| | $F = F_0 - 3 \text{ MHz}$ | — | -37 | — | dB |
| | $F \geq F_0 + 4 \text{ MHz}$ | — | -41 | — | dB |
| | $F \leq F_0 - 4 \text{ MHz}$ | — | -45 | — | dB |
| Image frequency | — | — | -41 | — | dB |
| Adjacent channel to image frequency | $F = F_{image} + 1 \text{ MHz}$ | — | -43 | — | dB |
| | $F = F_{image} - 1 \text{ MHz}$ | — | -38 | — | dB |

Table 33: Receiver Characteristics - Bluetooth LE 500 Kbps

| Parameter | Description | Min | Typ | Max | Unit |
|------------------------------------|---------------------------|-----|--------|-----|------|
| Sensitivity @30.8% PER | — | — | -102.0 | — | dBm |
| Maximum received signal @30.8% PER | — | — | 8 | — | dBm |
| Co-channel C/I | $F = F_0 \text{ MHz}$ | — | 4 | — | dB |
| | $F = F_0 + 1 \text{ MHz}$ | — | -6 | — | dB |
| | $F = F_0 - 1 \text{ MHz}$ | — | -5 | — | dB |

5 Package Information

Figure 8: QFN24 (4x4 mm) Package

Note:

- All dimensions are in millimeters (mm).
- The pins of the chip are numbered in a clockwise direction from Pin 1 in the top view;
- Please go to [Chipsets](#) to view the recommended PCB package source file (asc). The source file can be imported using software such as PADS or AD (Altium Designer);
- For information about tape, reel, and product marking, please refer to [Espressif Chip-Packing Information](#).

Revision History

| Date | Version | Release notes |
|------------|---------|---|
| 2022-12-08 | v1.1 | <ul style="list-style-type: none">• Delete feature "Antenna diversity"• Delete feature "Supports external power amplifier" |
| 2022-10-24 | v1.0 | <ul style="list-style-type: none">• Updated section ADC Characteristics.• Added section Reliability.• Updated section Bluetooth LE Radio• Added link to the recommended PCB package source file. |
| 2022-07-12 | v0.7 | Added table "power-up glitches on pins" for General Purpose Input / Output Interface (GPIO) |
| 2022-06-30 | v0.6 | Updated Current Consumption in Other Modes |
| 2022-05-05 | v0.5 | Updated Wi-Fi Radio and Bluetooth LE Radio |
| 2022-01-28 | v0.4 | Updated Electrical Characteristics and Package Information |
| 2021-12-22 | v0.2 | Updated section Applications |
| 2021-11-30 | v0.1 | Preliminary release |
